

Business Activity Monitoring API Developer

Function type: Freelance - Vast **Location:** Brussels
Duration: long term **Reference:** 202209250

Description:

Our Customer is active as a provider of digital services and communication solutions on the Belgian and international markets.

We offer our customers a world of digital opportunities so that they can live better and work smarter. We do this by offering products and services tailored to the needs of every customer and by being a partner of citizens, companies, and Belgian society in their digital evolution.

It is our ambition to become a truly customer-focused digital company. The customer is central to everything we do, and the customer journey should be as simple as possible with accessible and user-friendly solutions.

BAM

The concept of Business Activity Monitoring (BAM) is the acquisition, correlation, structuring, analysis, and presentation in real time of business data in the context of business process modelling.

The strategic focus of the team is building the real time visualization of the customer journey to allow instant and proactive reactions by the different divisions within the Customer to enrich the first time right and the customer centric concepts. Aligned and focused on achieving the Customers' vision and ambition.

In general, the core architecture of our BAM module is built on top of WebMethods EAI, Springboot Microservices, GraphQL and an Elasticsearch based search engine.

Role Description

We work in an Agile environment using a customized scrum framework. The scrum team you will be joining has a Product Owner and a Scrum Master who will help you integrate within their team, facilitate your job, and guide you through your journey.

Currently, we are undergoing a transformation, shifting to our target architecture while building a robust SDLC and STLC for our scrum teams to follow. Using your skills and expertise, you are expected to develop by example, collaborate with other streams and be a change agent.

Responsibilities

- Strong problem-solving skills
- Ability to lead initiatives and people toward common goals
- Thinking outside the box
- Assist the team to standardize and continuously improve the development flow while implementing best practices
- Take part in the design of Technical Analysis by translating and analysing Business Requirements
- Assist other developers in the team to create a standardised code structure
- Ensure the continuity and development of our SDLC and STLC to provide high availability solutions
- Design, develop and implement new integrations and applications from conception to completion
- Be part of a team to understand and evaluate complex data models to better correlate data from multiple sources based on Business Processes
